1. The first page displays the form where the user has to provide the specific details.

A screenshot of a web browser displaying a form titled "Insurance Premium Prediction". The form is set against a dark background with light-colored text and input fields. The browser's address bar shows "localhost:8501". The form contains the following fields and values:

- Please select gender:** A dropdown menu with "male" selected.
- Enter Age:** A text input field containing "21".
- Enter BMI:** A text input field containing "18".
- Please select number of children:** A dropdown menu with "0" selected.
- Please select smoker category:** A dropdown menu with "yes" selected.
- Please select region:** A dropdown menu with "southwest" selected.
- Show Result:** A button at the bottom of the form.

2. After entering all the required data, when the user clicks on predict button, we will get the prediction on new page.

A screenshot of the same web browser displaying the "Insurance Premium Prediction" form. The form fields are filled with the same data as in the previous screenshot, but the "Show Result" button is now highlighted with a red border. Below the form, the prediction result is displayed:

Insurance Prediction is 1619.25 INR

Insurance Prediction is 1619.25 INR
